

SEVEN VIDEOS ON SLIPS, TRIPS, AND FALLS FOR BRIEFINGS OR TRAININGS

Slips, trips, and falls (STF) accounts for over a quarter of all reported injuries in the process sector. At the national level, STF-related injuries were observed to have increased by 15% from 2015 to 2020, and has remained the top cause of injuries across all industries. In the process sector, STF account for over a quarter of all reported injuries, with some of the top causes being due to slippery floor and obstruction on walkway. These can be mitigated by first recognising the existence of STF hazards, before addressing and eliminating STF.

Below are seven short clips produced by companies and agencies that share how to look out for STF hazards and prevent such incidences.

	<p>Watch Out! Hazards! - Prevent Slips Trips and Falls https://youtu.be/wd_pvOpDQOg</p> <p>Owned by Safety Memos, an American YouTube channel that produces content relating to safety, educating viewers on identifying and handling hazards.</p>
